

FULL STACK DEVELOPMENT – DAY 6 SUMMARY

TODAY COVERED TOPICS:

❖ **CONDITIONAL STATEMENT**

- **IF STATEMENT**
- **IF-ELSE STATEMENT**
- **ELSE-IF LADDER**
- **NESTED – IF**
- **SWITCH STATEMENT**

➤ **CONDITIONAL STATEMENT:**

Conditional statement is used to make decision in a program. It checks whether a condition is true or false in execution code.

- **IF STATEMENT:**

It is used to execute a block of code only when the condition is true.

Ex:

```
int age = 20;
if(age >= 18)
{
    System.out.println("Eligible to vote");
}
```

- **IF-ELSE STATEMENT:**

It is used to execute the condition if true the block of code is executed. Otherwise it executes false.

Ex:

```
int num = 5;
if(num % 2 == 0){
    System.out.println("Even");
}
else{
    System.out.println("Odd");
}
```

- **ELSE-IF LADDER:**

It is used to execute multiple conditions.

Ex:

```
int mark = 75;
if(mark >= 90){
    System.out.println("A Grade");
}
else if(mark >= 60){
    System.out.println("B Grade");
}
else{
    System.out.println("Fail");
}
```

- **NESTED – IF :**

Nested-IF means it have if inside another if statement.

Ex:

```
int age = 20;

boolean idCard = true;

if(age >= 18){
    if(idCard){
        System.out.println("Entry Allowed");
    }
}
```

- **SWITCH STATEMENT:**

The switch statement is used when there are multiple choices or options.

Ex:

```
int day = 2;
switch(day){
case 1:
    System.out.println("Monday");
    break;
case 2:
    System.out.println("Tuesday");
    break;
default:
    System.out.println("Invalid");
}
```
