

## Full Stack Development - Day 11 Summary

### Today Covered Topic :

- ❖ Break Statement
- ❖ Continue Statement
- ❖ Oops
- ❖ Necessity
- ❖ Class
- ❖ Object

#### ➤ Break Statement:

Break Statement is used to stop la loop and it does not run remaining iteration.

Eg:

```
for(int i=1; i<=5; i++)
{
    if(i==3)
    {
        break;
    }
    System.out.println(i);
}
```

#### ➤ Continue Statement:

Continue Statement is used to skip the current iteration . And then continue the next iteration.

Eg:

```
for(int i=1; i<=5; i++)
{
    if(i==3)
    {
        continue;
    }
    System.out.println(i);
}
```

#### ➤ OOPS(Object Oriented Programming Language):

OOPS is a programming method that uses classes and objects to create programs. It helps to organize code in a simple and efficient way.

- ✓ Class
- ✓ Object
- ✓ Abstraction
- ✓ Encapsulation
- ✓ Polymorphism

#### Why OOPS:

- Reuse code easily.
- Improve security.

- Make programs easier to manage.
- Reduce code repetition.
- Represent real-world things in programs.

➤ **Class :**

A Class is a blueprint used to create objects.

➤ **Object:**

An Object is a real instance of a class.

**Eg:**

```
class Student
{
    String name;
    int age;
}

public class Main
{
    public static void main(String[] args)
    {
        Student s1 = new Student();
        s1.name = "Ravi";
        s1.age = 20;
        System.out.println("Name: " + s1.name);
        System.out.println("Age: " + s1.age);
    }
}
```
