

Full Stack Development – Summary

Today Covered Topics: - String

➤ **String:**

String is a Sequence of character enclosed with double quotes("").

Important in method of String class:

- **Length()**

Eg:

```
public class LengthExample {  
  
    public static void main(String[] args) {  
  
        String name = "Porselvi";  
  
        System.out.println("Length = " + name.length());  
    }  
}
```

- **charAt()**

Eg:

```
public class CharAtExample {  
  
    public static void main(String[] args) {  
  
        String name = "Porselvi";  
  
        System.out.println(name.charAt(3));  
    }  
}
```

- **substring()**

Eg:

```
public class SubStringExample {  
  
    public static void main(String[] args) {  
  
        String name = "Porselvi";  
  
        System.out.println(name.substring(3));  
    }  
}
```

- **equals**

Eg:

```
public class EqualsExample {  
  
    public static void main(String[] args) {  
  
        String s1 = "Java";  
        String s2 = "Java";  
  
        System.out.println(s1.equals(s2));  
    }  
}
```

- **equalsIgnoreCase()**

Eg:

```
public class EqualsIgnoreCaseExample {  
  
    public static void main(String[] args) {  
  
        String s1 = "JAVA";  
        String s2 = "java";  
  
        System.out.println(s1.equalsIgnoreCase(s2));  
    }  
}
```

- **toUpperCase**

Eg:

```
public class UpperCaseExample {  
  
    public static void main(String[] args) {  
  
        String city = "chennai";  
  
        System.out.println(city.toUpperCase());  
    }  
}
```

- **toLowerCase()**

Eg:

```
public class LowerCaseExample {  
  
    public static void main(String[] args) {
```

```
String city = "CHENNAI";

System.out.println(city.toLowerCase());
}
}
```

- **replace()**

Eg:

```
public class ReplaceExample {

    public static void main(String[] args) {

        String name = "Porselvi";

        System.out.println(name.replace('P', 'K'));
    }
}
```

- **split()**

Eg:

```
public class SplitExample {

    public static void main(String[] args) {

        String sentence = "I Love Java";

        String[] words = sentence.split(" ");

        for(int i = 0; i < words.length; i++) {
            System.out.println(words[i]);
        }
    }
}
```

- **trim()-remove space**

Eg:

```
public class TrimExample {

    public static void main(String[] args) {

        String name = " Java ";

        System.out.println(name.trim());
    }
}
```

```
}
```

- **concat()-join two string**

Eg:

```
public class ConcatExample {  
  
    public static void main(String[] args) {  
  
        String firstName = "Por";  
        String lastName = "selvi";  
  
        String fullName = firstName.concat(lastName);  
  
        System.out.println(fullName);  
    }  
}
```

- **contains**

Eg:

```
public class ContainsExample {  
  
    public static void main(String[] args) {  
  
        String sentence = "I Love Java";  
  
        System.out.println(sentence.contains("Java"));  
    }  
}
```
