

FullStack Development – Day 16 Summary

Today Covered Topic:

- ❖ **Copy Constructor**
- ❖ **this keyword**

➤ **Copy Constructor:**

Used to create a new object by copying another object values.

Eg:

```
class Student {
    String name;

    Student(String name) {
        this.name = name;
    }

    Student(Student s) {
        this.name = s.name;
    }
}

public class Main {
    public static void main(String[] args) {

        Student s1 = new Student("Selvi");

        Student s2 = new Student(s1);

        System.out.println(s2.name);
    }
}
```

➤ **this keyword:**

Used to refer to the current object and avoid confusion between variables.

Eg:

```
class Student {
    String name;

    Student(String name) {
        this.name = name;
    }

    void display() {
        System.out.println(name);
    }
}

public class Main {
```

```
public static void main(String[] args) {  
    Student s = new Student("Selvi");  
    s.display();  
}  
}
```
