

Full Stack Development – Day 14 Summary

Today Covered Topics:

- ❖ **Return**
- ❖ **Component of class**
- ❖ **Types Of Variables**

➤ **Return :**

Return gives the result of a method and Methods with void do **not** return any value.

Eg:

```
public class Names {  
  
    static String getName() {  
        return "Selvi";  
    }  
  
    public static void main(String[] args) {  
        String name = getName();  
        System.out.println(name);  
    }  
}
```

➤ **Component Of Class:**

1. Variables(data Member) – It can used to store the data.
2. Methods(Member Function or behaviour) – its used to perform like to define the action.
3. Constructors – Its used to initialize the object.
4. Blocks(Static/Instance)-Execute the specific part of Code.
5. Inner classes – inner classes.

➤ **Types Of Variable:**

- I. Instance Variable – Inside the class Outside method.
- II. Static Variable – Inside class with static keyword.
- III. Local variable- inside the method.

❖ **Instance Variable:**

Eg:

```
public class Student {  
    String name = "Selvi";  
  
    public static void main(String[] args) {  
        Student s = new Student();  
        System.out.println(s.name);  
    }  
}
```

❖ **Static Variable :**

Eg:

```
public class Student {  
    static String college = "ABC College";  
  
    public static void main(String[] args) {  
        System.out.println(Student.college);  
    }  
}
```

❖ **Local Variable**

Eg:

```
public class Student {  
  
    public static void main(String[] args) {  
        int age = 20; // Local Variable  
        System.out.println(age);  
    }  
}
```
